

Lil' Ming Brightens the World (小明)

Lil' Ming was born in outer space when a beam of light from the universe's first star collided with Earth. He is a happy and benevolent engineering spirit who seeks to bring joy and light to the world through his magical electrical powers.

Inspiration

The design was created using Dall-E AI. I entered the phrase "An Oil Painting of a Microchip Smiling on a Rainbow in Outer Space". Our department is named after our benevolent benefactor Ming Hsieh. In Chinese, the word "ming" (明) means "bright". It is important to remember that as engineers, it is our job to bring brightness to this world and fight against darkness and ignorance.

Lil' Ming Brightens the World!
